Offshore/Outsource

- ANR offers offshore services in the areas of product development, application development, unit-testing, and on-going production support services.
- The following are the key technology areas that ANR is currently focused on:
 - Remote Database Administration support services
 - Cloning, Patching, Backups, Archives, Database monitoring services
 - Performance tuning and optimization services
 - 24*7 Failover and High-Availability production support services
 - Application development services
 - Oracle Reports, Forms, Interface development (including OA framework)
 - XML Publisher and BI Publisher template development
 - Business Intelligence implementations and support (DBI, OBIEE, OBA, etc.)
 - Unit-testing support services
 - Complete documentation for iterative testing in subsequent phases

Offshore/Outsource

- ANR relies on proven best practices and methodologies to deliver quality offshore solutions. Each project begins with a thorough analysis and planning based on client requirements. Each project is assigned a project manager and a project oversight, regardless of size or complexity. ANR typically deploys an on-site project coordinator to coordinate tasks between on-site end-users and remote offshore staff. Our delivery process consists of a solution framework, utilizing proven collaboration techniques, standardized implementation templates and guidelines. Each task order is supported by thorough documentation that serves two purposes: a solution outline for end-users and a guide for ongoing technical support personnel.
- ANR facilitates the following for an efficient and effective work environment:
 - Dedicated world class Development Centers
 - State-of-the-art communication and support infrastructure
 - High Bandwidth connectivity
 - A variety of hardware platforms
 - Secure project development environment
 - Access to training and education on all new evolving technologies
